

Harbor Relay pilot review memo

Version 1 working baseline — for review against version 2

Matter: the internal record · US pilot launch 21 October 2026

Status note: This memo is a **version 1 working baseline** built from the supplied specification v1 and the original saved advice. It reflects a **30-day report retention, customer-only access, and support access unconfirmed.** It must be reviewed against specification version 2 (which changes retention to 180 days and specifies ticket-only, logged support access) before any conclusion is relied on. No legal decision is recorded and no final draft exists.

Summary

Harbor Relay is planned for a US pilot launching 21 October 2026. The product sends an account activity report to the customer. Under the version 1 baseline, reports are retained for 30 days and only the customer can open them; whether support staff can open reports is unconfirmed. Because the report contains customer transaction/account data, the retention period and the access model are privacy and data-access controls that should be confirmed and documented before launch. This memo is a baseline only and needs review against version 2.

Retention

- **Baseline (v2):** Reports are retained for **180 days**.
- The 180-day window should be confirmed as deliberate and consistent with any data-minimization or deletion commitments.
- **Review point:** Version 2 changes retention to **180 days**. That is a materially longer window and must be reviewed on its own — the business rationale, consistency with deletion/data-minimization commitments, and whether the longer window is disclosed.

Support access

- **Baseline (v1):** The supplied specification states only the customer can open reports; support access is **unconfirmed**.
- **Reported (not independently verified):** Sam Patel reports that support can open a report only for a customer support ticket, and every access is logged. This is a reported fact, not a verified one.
- **Review point:** Version 2 specifies that customers and support staff can open reports, with support access requiring a customer support ticket and being logged. If that is the intended model, the earlier "only the customer can open" language is superseded, and any customer-facing disclosure should reflect the actual access model.

Open items

- Confirm the intended retention period (30 vs 180 days) and the rationale for any change.
- Confirm the intended support-access model: ticket-only and logged (per Sam Patel's report and v2) versus customer-only (per v1).
- Confirm whether the "only the customer can open" access statement needs reconciling with any support access.
- Confirm whether the ticket-gating and logging controls are sufficient and implemented as described.
- Confirm whether the 30/180-day retention is disclosed to customers.

Lawyer note

Preserve this exact qualification: Sam Patel reported ticket-only logged support access; implementation and the retention rationale remain unverified.
