

Themis.ai

The lawyer makes the call. Themis makes sure they do not face it alone.

01

See the full legal space

02

Challenge blind spots and assumptions

03

Remember the context and decision

Today — the work that needs the lawyer’s judgment

A working product-counsel companion. Built around the matter, not the chat.

The lawyer must first map the whole question

A product question arrives with mixed goals, missing facts, prior decisions, and a deadline. The lawyer must still act before every fact is known.

The private burden is not simply being wrong. It is missing something the lawyer should have seen.

1

What is the business trying to do?

2

Which facts change the result?

3

What law, policy, and precedent apply?

4

What has not been asked?

5

Which paths are realistic?

6

What must be supported or revisited?

Most AI starts with the prompt. The lawyer's work starts with understanding the space around it.

The lawyer decides. Themis stays with them.

A persistent second perspective helps counsel understand the legal space, work toward an answer, and preserve the context needed to support it later.

01

Sees the whole space

Maps the business objective, legal issues, possible paths, material facts, and gaps that could change the result.

02

Tests the path

Asks the next question, checks assumptions, surfaces blind spots, and shows where more support is needed.

03

Remembers why

Keeps the conversation, sources, recommendation, recorded decision, and the facts that may require another look.

WHY WE BELIEVE THIS

Practitioners praise tools that clarify uncertainty and catch issues without extra prompting.

They reject work they cannot verify, explain, or own.

Themis does not define the answer. It helps the lawyer reach one they can stand behind.

Lawyers reward companion behavior, not just prose

- “The only one that caught it without further prompting was Claude Opus.”

~30-attorney firm after trialing CoCounsel, Harvey, and Legora · r/legaltech, Aug 30 2026

- “...it asks for clarification when it doesn’t know.”

Why one practitioner preferred Claude · r/paralegal, Mar 23 2026

- “Lawyers need workspaces tied to matters, not chat sessions tied to nothing.”

The demand for continuity, not another chat window · r/legaltech, May 12 2026

- “I feel more confident with my work product using Harvey.”

A mid-level lawyer describing the desired outcome · r/biglaw, Jun 24 2026

widen the field of view · expose uncertainty · keep context · leave ownership with the lawyer

One matter stays intact through the judgment

1 BRING IN THE REAL QUESTION

Paste the request, messages, specifications, and documents. Start from the actual matter.

2 BUILD SHARED UNDERSTANDING

Business objective, facts, gaps, issues, prior decisions, and the next useful question.

3 EXPLORE AND TEST

Research, compare paths, draft, and name the assumptions and blind spots that remain.

4 KEEP JUDGMENT WITH THE LAWYER

A recommendation stays a proposal until the lawyer explicitly records the decision.

5 RETURN WITHOUT RECONSTRUCTING

The conversation, work, rationale, decision, and next action survive the model and the session.

The model can change. The matter remembers.

One page holds the full matter

The question comes before the files

The business goal and exact legal question anchor the matter.

Blind spots remain visible

Missing facts, research questions, and required work do not disappear in chat.

Recommendation is not decision

Themis can propose. Only the lawyer records the call.

Return without starting over

Current work, owner, rationale, and next action persist.

The architecture keeps judgment with the lawyer

01

Useful before perfect

Deliver the strongest useful first pass. Missing support reduces certainty; it does not erase useful work.

02

Honest about the edge

Show assumptions, missing facts, source status, and what was not reviewed. Never invent support.

03

Human decision by design

Recommendations never silently become decisions. Recording the call requires explicit lawyer action.

04

Durable, portable context

Markdown is the source of truth. The index rebuilds. Five provider adapters let the customer keep the record and change the model.

No one owns continuity of judgment

PART OF THE JOB

WHO WINS IT TODAY

WHAT REMAINS

Think and draft

ChatGPT / Claude

General reasoning; matter context resets

Find legal authority

Westlaw / Lexis

Trusted corpus; business context lives elsewhere

Repeat document work

Harvey / Legora / CoCounsel

Strong workflows; broad suite and rollout

Store records and tasks

Practice systems

Files persist; legal orientation does not

Understand, decide, remember

Themis

One matter holds the question, work, judgment, and return state

Beachhead: solo GC and 1–5 person legal teams—broad responsibility, little junior support, and no appetite for an enterprise rollout.

The thesis is already a working system

BUILT AND PASSING

- 16 product routes; matter intake, context, agents, and saved work
- Research queues, document review, recommendations, and decisions
- 824 backend tests passed
- Frontend typecheck and production build passed
- Five model providers; Markdown vault; rebuildable SQLite

HONEST BOUNDARY

- Single-user local application
- No authentication, tenancy, or team permissions
- No court-grade citation validation
- No source-layout-preserving Word round trip
- Not for privileged material in an untrusted environment
- Narrow by design while the thesis is tested

WHAT WE PROVE NEXT

- Passage-level source proof and a coverage receipt
- Faster return-to-matter orientation
- Stronger decision-support review loops
- Real product-counsel design partners
- Repeat use, willingness to pay, and retention
- The sentence: “It helped me see what I was missing.”

The working build proves the product can carry the matter. Design partners must prove that lawyers want this relationship.

The thesis rests on one human assumption

Lawyers do not want AI to make the judgment. They want help seeing the full legal space before they make it.

THE BET

A wider field of view matters more than faster prose.

The product earns trust by surfacing issues, paths, gaps, and uncertainty.

Matter memory becomes part of the relationship.

Value compounds when the lawyer returns to the same facts, reasoning, and decisions.

Visible limits and human control create comfort.

Themis shows where it stops and leaves the final call explicit.

Small legal teams will try it before enterprise controls exist.

One real matter can prove value without migration or a broad rollout.

The measure is what the lawyer can now see.

Success: “It helped me see what I was missing. I still made the call.”

WHAT WOULD PROVE IT WRONG

■ Lawyers skip the issue map and use Themis only to copy a conclusion.

■ Use remains one-off, or keeping the record current costs more than it returns.

■ Visibility creates more review work, or users still will not trust the system.

■ Confidentiality and approved deployment block every meaningful trial.

■ Themis improves drafting speed but does not change judgment, return use, or willingness to pay.
