

Problem Unseen issues can change the advice. Research and preparation absorb time. Directing general AI adds work.	Solution Explore the matter and surface useful questions. Deliver research and editable drafts. A system already adapted to lawyers.	Unique Value Proposition Themis equips lawyers to advise with confidence—and gives them more time to be present in the room, shaping business decisions.	Unfair Advantage 17 years in law, plus AI research experience. Direct access to counsel feedback. Firsthand insight into how lawyers work.	Customer Segments Solo general counsel and small in-house legal teams. Start with product and regulatory work at technology and fintech companies.
Existing Alternatives Claude and ChatGPT. Harvey, Legora, CoCounsel and GC AI. Manual research and drafting. Colleagues and outside counsel.	Key Metrics Readiness to advise, backed by understanding. Useful issues surfaced. Net lawyer time saved. Pilot goals: 60% repeat use; 25% less effort.	High-Level Concept A capable AI companion built around the lawyer. It helps you explore the options so you can give advice you understand and stand behind.	Channels Founder's counsel network. Live-matter demos and supported pilots. Counsel communities and peer referrals.	Early Adopters Product lawyers with live, unfamiliar questions. Already using AI and eager for support that fits their work. Ready to try one real matter.
Cost Structure People: product development, engineering and customer support. Usage: AI models, research tools and hosting. Customer acquisition: founder outreach, demos and supported pilots. Distribution: digital access, onboarding and payment processing. Operations: security, administration and legal costs.			Revenue Streams Proposed recurring price: \$500 per lawyer/month (\$6,000/year). Start with one seat; grow through repeat use and team expansion. One-time fees: none planned. Gross margin target: 80%. Illustrative customer lifetime value: \$14,400 per seat over 3 years at 80% margin. Pricing, retention and margin are planning assumptions to test.
