

THEMIS

Equipped to advise with confidence

A capable AI companion
built around the lawyer.

More time in the room,
shaping business decisions.

Brian Harris, Founder / September 2026

The business asks, “Can we ship Friday?”

**The lawyer needs to know
what could change the answer.**

BEFORE GIVING THE ADVICE

Which facts matter? What have we missed?
What are the options and their tradeoffs?

OFTEN WORKING THROUGH IT ALONE

The same lawyer must investigate
the issue and help the business
decide what to do.

The business needs their judgment while the decision is still taking shape.

A capable companion, built around the lawyer

Lawyers should not need to build an AI system
to get a capable legal companion.

THEMIS CARRIES THE PREPARATION

Investigates the matter and brings back
useful analysis in the lawyer's working style.
Surfaces questions worth exploring next.

THE LAWYER WORKS THROUGH THE CHOICE

Examines the options with Themis.
Sees what could change the advice.
Decides what to recommend and why.

Product thesis. The prototype supports matters, editable instructions and work product. Pilot outcomes remain to be proved.

A migration question hides a second decision

THE BUSINESS REQUEST

“Can we keep bank connections live during the migration?”

WHAT THE INVESTIGATION SURFACES

Growth also wants transaction data for new offers.
The existing consent does not clearly cover that use.

WHAT THE LAWYER CAN NOW WEIGH

Separate consent for new uses.
Then choose when customers must authorize the migration.

The lawyer sees a choice the original question did not expose.

Illustrative walkthrough based on fictional Relay demo data. Not a recorded AI exchange or verified legal advice.

The lawyer has a basis for the advice

REQUIRED WORK

Select the customer reauthentication path

Stage: Waiting on your judgment. Brian Harris must act next: Select the customer reauthentication path

Matter at a glance

Relay is moving about 280,000 customers from credential-based bank connections to OAuth and bank APIs. Product prefers to let existing connections continue until a bank requires reauthentication, while Growth wants to use two years of transaction history for card and lending offers. The current consent does not clearly disclose these uses or set a deletion period after disconnection. Legal guidance is needed before the aggregator contract renews on September 15.

Question to resolve

Should Relay let existing bank connections continue until each customer must reauthenticate, or require all 280,000 customers to reauthorize within 90 days? In either case, should marketing and lending uses require separate consent, and should disconnected-account data be deleted after 30 days?

RELAY DEMO

A draft note sets out a proposed path and its conditions.

The lawyer can weigh the path before advising.

Actual prototype capture. Fictional seeded demo content, including the separate draft decision note.

The next advantage is who does the directing

POWERFUL TOOLS ALREADY EXIST

Claude

Research, legal plugins and work across files.

Settings adapt it to a team's methods.

ChatGPT

Projects, custom instructions and research support ongoing work.

Pilot test: useful issues discovered and advice prepared with less lawyer steering than configured Claude or ChatGPT.

THEMIS'S PROPOSED ADVANTAGE

Less work directing the investigation

A system that starts with the matter, surfaces what could change the advice, and prepares work in the lawyer's style.

The lawyer can spend more attention on the choice itself.

Legal teams are forming their AI habits

36%

of surveyed legal departments
are actively deploying generative AI.

63%

of surveyed chief legal officers
expect headcount to stay stable.

Our opening: become the companion small legal teams turn to as they work through decisions.

ACC 2026 Chief Legal Officers Survey. 1,049 participants across 43 countries.

One lawyer. A company's worth of questions

INITIAL BUYER

Solo general counsel or a small legal team

Start with product and regulatory questions
at technology and fintech companies.

THE BUYING MOMENT

An unfamiliar issue before a launch.
Powerful AI, but more work to direct
it.

A decision that cannot wait.

**One lawyer can test Themis
on one live matter.**

Four exploratory counsel interviews inform this focus. They are research, not customers or pilot commitments.

A legal companion, by subscription

\$500

per lawyer, per month

Proposed starting price

One lawyer. One real matter to start.

VALUE TEST

One hour a week

At an assumed \$250 per lawyer hour, that is about \$1,000 of monthly capacity for a \$500 subscription.

**Test readiness to advise
and net time saved.**

Illustrative economics: 4 weeks/month. Capacity value is not cash savings. Price and benefit are unvalidated.

U.S. in-house counsel offers room to grow

145,000

estimated U.S. in-house lawyers
ACC analysis of 2024 employment data

MODELED U.S. POTENTIAL

\$870M

145,000 lawyers × \$6,000 per year

Initial segment scenario: 10–20% of those lawyers
14,500–29,000 seats, or \$87M–\$174M annually

Scenario, not a market forecast. Assumes full adoption at proposed pricing; initial-segment share is unverified.

The first sale starts with a real matter

01 Recruit through Brian's network

Target solo general counsel and product lawyers. Ask for one active matter.

02 Run a short, supported pilot

Compare readiness to advise and total effort with configured Claude or ChatGPT.

03 Convert, then expand

Charge for continued use. Seek referrals and a second paid seat after repeat value.

First 90-day targets: 20 qualified conversations, 10 pilot lawyers, 5 paying lawyers. Proposed targets, not pipeline.

FOUNDER

I know what it takes to be ready to advise

Brian Harris

Sole founder

LIVED THE WORK

17 years as a lawyer
General counsel and product counsel
Built legal functions and led teams

BUILT THE PROTOTYPE

Earlier AI research at Georgia Tech
M.S. in Computer Science, Georgia Tech
J.D., Northwestern

Confidence grounded in better understanding

PRODUCT EVIDENCE

Useful issues surfaced with less lawyer steering

Can the lawyer explain the recommendation
and what could change it?

Does total preparation effort fall?

COMMERCIAL TARGETS

25 paying teams
50 paying lawyers
**\$300,000 annual recurring
revenue**

60% start a second matter
within 30 days.

Proposed targets, not results. Today: local prototype and four exploratory interviews. No paid traction demonstrated.

A capable companion for small legal teams

\$1.5M

Proposed pre-seed raise
18 months of focused execution

Themis equips lawyers to advise with confidence—and gives them more time to be present in the room, shaping business decisions.

THE NEXT STAGE

Build the founding technical team.
Put Themis into live legal matters.
Prove lawyers return and pay.

Themis brings intelligence at scale.

The lawyer brings judgment

Themis brings	The lawyer brings
Speed and capacity	Business and human context
Research and analysis	Experience and wisdom
Persistent memory	Values and risk tolerance
Questions and alternatives	The choice of path
Accurate, well-supported work	Ownership of the decision

More capacity for the work only the lawyer can do.

Trust is earned by how the product behaves.

Themis should feel like a capable colleague whose conduct makes the lawyer stronger.

01 **Humble, not performative.**

It shows uncertainty and does not pretend that ambiguity has disappeared.

03 **Present, not intrusive.**

It is available throughout the matter without taking control of the decision.

05 **Supportive, not substitutive.**

It strengthens the lawyer's judgment instead of presenting itself as the legal authority.

02 **Curious, not merely declarative.**

It asks the question that exposes the missing fact or untested assumption.

04 **Persistent, not forgetful.**

It carries context forward so the lawyer does not have to reconstruct the matter each time.

06 **Faithful, not revisionist.**

It records the lawyer's decision without silently turning a model recommendation into that decision.

This is what it means for Themis not to be a soulless product: its values appear in repeated, observable behavior.

INVESTOR IMPLICATION

These behaviors turn the emotional promise into product requirements. If they remain consistent across models and matters, the ethos can become part of the user experience rather than branding placed on top of it.

A focused 18-month plan

Use of funds	Budget
Founder and technical delivery	\$900,000
Customer development	\$180,000
Models, research and infrastructure	\$150,000
Secure pilot delivery and operations	\$120,000
Contingency	\$150,000
Total	\$1,500,000

WHAT THE PLAN MUST PROVE

Advice has a clear basis.
Lawyers return and pay.
Total effort falls.
Delivery costs support the price.

Shared work and automatic adaptation require further product development.

Proposed budget and milestones for investor discussion. Final staffing and financing terms remain open.
