

THEMIS

The AI companion for in-house counsel

Equipped to advise with confidence.

More time to be present in the room,
shaping business decisions.

Brian Harris, Founder / September 2026

PROBLEM

**The business needs advice.
The lawyer has to investigate first**

THE REQUEST

**A product team wants to
reuse customer data.**

The question leaves out the purpose,
permissions and timing.

THE WORK BEHIND THE ADVICE

Find the facts that change the analysis.
Research unfamiliar issues.
Work through the available choices.
Prepare advice the business can use.

While the lawyer prepares, business decisions keep moving.

Confidence comes from understanding the choices

**Themis prepares the matter.
The lawyer explores the answer space.**

A SYSTEM ALREADY ADAPTED TO LAWYERS

Research and editable drafts.
Material assumptions made visible.
Useful questions to explore next.

A BASIS FOR THE LAWYER'S JUDGMENT

Work through the options together.
See what could change the advice.
Decide what to recommend and why.

Product thesis. The lawyer directs the inquiry and owns the decision.

A migration request hides a separate data-use decision

ILLUSTRATIVE MATTER

Keep bank connections live during a migration.

The investigation also surfaces a plan to use transaction data for new offers.

The lawyer can now weigh the permissions for each use.

Actual prototype capture with fictional seeded content. Illustrates the intended experience, not proven AI discovery.

REQUIRED WORK

Select the customer reauthentication path

Stage: Waiting on your judgment. Brian Harris must act next: Select the customer reauthentication path

Matter at a glance

Relay is moving about 280,000 customers from credential-based bank connections to OAuth and bank APIs. Product prefers to let existing connections continue until a bank requires reauthentication, while Growth wants to use two years of transaction history for card and lending offers. The current consent does not clearly disclose these uses or set a deletion period after disconnection. Legal guidance is needed before the aggregator contract renews on September 15.

Question to resolve

Should Relay let existing bank connections continue until each customer must reauthenticate, or require all 280,000 customers to reauthorize within 90 days? In either case, should marketing and lending uses require separate consent, and should disconnected-account data be deleted after 30 days?

The matter brings the open choices into view.

**Built by a GC who has
built legal teams**

Brian Harris

Sole founder

17 years

practicing law, including general
counsel and product counsel roles

SETTLE AND MANIFEST

Built legal and compliance functions
from inception.

AFFIRM AND FACEBOOK PORTAL

Advised product teams through
launches and regulatory questions.

AI research at Georgia Tech.
M.S. Computer Science. J.D. Northwestern.

Built around how a small-team lawyer reaches a decision

THE TOOLS ALREADY AVAILABLE

Claude and ChatGPT

Flexible research, drafting and custom workflows.

Harvey, Legora, CoCounsel, GC AI

Legal research, work product and workflow tools.

THEMIS'S PROPOSED ADVANTAGE

**A prepared matter.
Visible choices.
Less work directing AI.**

Optimize for the lawyer's readiness to advise, measured against the tools they already use.

Legal teams are choosing how AI will fit their work

36%

of surveyed legal departments are actively deploying generative AI.

63%

of surveyed chief legal officers expect headcount to stay stable.

The opportunity is more capacity from the lawyers already in the room.

ACC 2026 Chief Legal Officers Survey. 1,049 participants across 43 countries.

The first legal hire is our first buyer

**Solo GCs and small product legal teams
at technology and fintech companies.**

A CLEAR REASON TO TRY

Frequent launches. Limited research support.
Already using Claude or ChatGPT.
A live matter that needs deeper exploration.

A DIRECT ROUTE TO ADOPTION

Brian's counsel network brings the first pilot.
Useful work earns the next matter.
Paid use earns a referral or another seat.

First 90-day targets after pilot access: 20 qualified conversations, 10 pilot lawyers, 5 paying lawyers.

A legal companion one lawyer can buy

\$400

per lawyer, per month

Proposed price. Start with one seat.
Monthly billing. No annual commitment.
No setup fee.

A SMALL THRESHOLD FOR USEFUL CAPACITY

24 minutes a week

At an assumed \$250 per lawyer hour,
that time equals the monthly price.

Illustration uses four weeks/month. Capacity is not cash savings. Pricing and an 80% gross margin target need validation.

A \$696M annual U.S. in-house subscription opportunity

145,000

estimated U.S. in-house lawyers

\$4,800

annual revenue per lawyer
at the proposed monthly price

21,000 paying lawyers would generate about \$100M a year.

Full-market model, not a forecast. 21,000 seats is about 14.5% of the U.S. estimate. The starting segment is smaller.

The prototype is built.

Repeat paid use is the next proof

TODAY

Working local prototype

Matters, research and editable work product.
Four exploratory counsel interviews.

No paid traction demonstrated.

PROPOSED 18-MONTH TARGETS

50 paying lawyers
\$240,000 annual recurring revenue

60% return with a second matter.
25% less total preparation effort.
A clear basis for the lawyer's advice.

Targets, not results. Compare total effort and useful issues surfaced against the lawyer's configured usual tools.

Put a capable companion beside the in-house lawyer

\$1.5M

Proposed pre-seed raise
18 months of focused execution

WHAT THE CAPITAL ENABLES

A founding technical team.
Live use with working lawyers.
Evidence that lawyers return and
pay.

Themis equips lawyers to advise with confidence—and gives them more time to be present in the room, shaping business decisions.

The alternatives already do useful legal work

Alternative	Current strengths	Themis must earn the switch
Claude / ChatGPT	Research, drafting, custom instructions and workflows. Claude has a legal plugin.	Less effort directing the matter with useful questions surfaced.
Harvey / Legora	Legal agents, research, document review and work adapted to customer methods.	A compelling daily experience for small in-house teams.
CoCounsel / GC AI	Legal work product and research. GC AI directly serves in-house counsel.	Better preparation for advice on the buyer's actual matters.

Positioning comparison, not a controlled benchmark. Feature overlap is substantial.

A seat model with a low entry commitment

Scope or benchmark	Basis	Annual amount
Full U.S. in-house model	145,000 seats × \$4,800	\$696M
Scale illustration	21,000 seats × \$4,800	\$100.8M
One Themis seat, proposed	12 monthly payments of \$400	\$4,800
Harvey buyer-reported quote	5 seats × \$425 × 12-month term	\$25,500

Small tech and fintech teams first. Broader in-house use follows demonstrated value.

ACC population estimate. Themis pricing is proposed. Harvey is one anonymous quote, not a standard rate or verified payment.

An 18-month plan to establish paid use

Use of funds	Proposed budget
Founder and technical delivery	\$900,000
Customer development	\$180,000
Models, research and infrastructure	\$150,000
Secure pilot delivery and operations	\$120,000
Contingency	\$150,000
Total	\$1,500,000

THE FUNDING TEST

Lawyers use it on live matters.
They return and pay.
Preparation effort falls.
Delivery costs support the price.

Hiring sequence and financing terms remain open.

Trust is earned by how the product behaves.

Themis should feel like a capable colleague whose conduct makes the lawyer stronger.

01 **Humble, not performative.**

It shows uncertainty and does not pretend that ambiguity has disappeared.

03 **Present, not intrusive.**

It is available throughout the matter without taking control of the decision.

05 **Supportive, not substitutive.**

It strengthens the lawyer's judgment instead of presenting itself as the legal authority.

02 **Curious, not merely declarative.**

It asks the question that exposes the missing fact or untested assumption.

04 **Persistent, not forgetful.**

It carries context forward so the lawyer does not have to reconstruct the matter each time.

06 **Faithful, not revisionist.**

It records the lawyer's decision without silently turning a model recommendation into that decision.

This is what it means for Themis not to be a soulless product: its values appear in repeated, observable behavior.

INVESTOR IMPLICATION

These behaviors turn the emotional promise into product requirements. If they remain consistent across models and matters, the ethos can become part of the user experience rather than branding placed on top of it.
